

EXPERIENCE

Relativity

Senior Software Engineer

12/2025 - Present

Migrating a legacy .NET Framework and Angular app to .NET 10 and React microfrontends as part of a Cloud Native Transformation

Driving code quality in an AI-assisted workflow through code reviews, documentation and agent guidelines (AGENTS.md)

Building robust .NET backends and polished, animated React frontends

Deltologic

Full Stack Software Engineer Contractor (.Net, Node.js, React, AWS)

12/2025 - Present

Migrated a production database from RDS SQL Server to Aurora PostgreSQL, cutting costs by over 60% and eliminating a storage I/O bottleneck

Maintaining .NET and React apps; driving AWS infrastructure improvements and cost optimization

Deltologic

Senior Full Stack Software Engineer (.Net, Node.js, React, AWS)

07/2023 - 11/2025

Led engineering on an AWS-based .NET and React project, coordinating delivery with the client's other subcontractors

Migrated multiple .NET Framework applications to .NET 8

Improved observability by integrating Datadog via OpenTelemetry across a .NET/React stack

Built Node.js projects, including AWS Lambda-based APIs and Chrome extensions

Interviewed and assessed engineering candidates in technical recruitment

Freelance

Freelance Software Engineer

10/2024 - Present

Building custom .NET, TypeScript and React web apps and APIs end-to-end: requirements, architecture, deployment and maintenance

Capgemini

Full Stack Software Engineer (.Net)

04/2022 - 06/2023

Developed and maintained an ASP.NET MVC (.NET Framework) application

Introduced CI/CD pipelines and negotiated adoption of JetBrains tooling with the client

Inetum

Junior Full Stack Software Engineer (.Net, React)

01/2021 - 03/2022

Built multiple .NET Core microservices and web APIs; maintained a .NET Framework app with React frontend

Created a standardized Android Virtual Device config mirroring the production device for team-wide Xamarin development

PREVIOUS EXPERIENCE

Junior QA Automation Engineer (Groovy, .Net, Azure)

Inetum

10/2019 - 12/2020

QA Automation Engineer Intern (Java, Groovy)

Inetum

07/2019 - 09/2019

EDUCATION

Poznan University of Technology, M.Eng

09/2022

Contributed to ProcessM project (grant no. LIDER/14/0086/L-10/18/NCBR/2019)

Speciality - Intelligent Internet Technologies (AI, web development)

Poznan University of Technology, B.Eng

02/2021

Received the Poznan University of Technology Rector's Scholarship

Speciality - Security of IT Systems

DETAILS

EXPERIENCE

Relativity

Cracow (Remote)12/2025 - Present

Senior Software Engineer

- Migrating a legacy .NET Framework and Angular application to .NET 10 and React microfrontends as part of a Cloud Native Transformation, moving from a lift-and-shift cloud deployment to scalable, cloud-native services
- Driving code quality in an AI-assisted workflow through code reviews, documentation, and agent guidelines (AGENTS.md)
- Building robust .NET backends and polished, animated React frontends

Deltologic

Poznan (Remote)12/2025 - Present

Full Stack Software Engineer Contractor (.Net, Node.js, React, AWS)

- Developed and maintained .NET and React applications; drove AWS infrastructure improvements and cost optimization
- Migrated a production database from RDS SQL Server to Aurora PostgreSQL, cutting costs by over 60% while eliminating a storage I/O bottleneck and improving compute performance through Serverless autoscaling

Deltologic

Poznan07/2023 - 11/2025

Senior Full Stack Software Engineer (.Net, Node.js, React, AWS)

- Led engineering on an AWS-based .NET and React project, coordinating delivery with the client's other subcontractors
- Migrated multiple .NET Framework applications to .NET 8
- Improved application observability by integrating Datadog via OpenTelemetry across a .NET/React stack
- Built Node.js projects, including AWS Lambda-based APIs and Chrome extensions
- Interviewed and assessed engineering candidates in the technical stage of recruitment

Freelance

Remote10/2024 - Present

Freelance Software Engineer

- Build custom web applications and APIs for clients using .NET, TypeScript/JavaScript, and React
- Deliver end-to-end: requirements, architecture, implementation, deployment, and maintenance

Capgemini

Poznan04/2022 - 06/2023

Full Stack Software Engineer (.Net)

- Developed and maintained an ASP.NET MVC (.NET Framework) application
- Introduced CI/CD pipelines, automating build and deployment for the project
- Negotiated adoption of JetBrains tooling with the client, improving developer productivity

Inetum

Poznan01/2021 - 03/2022

Junior Full Stack Software Engineer (.Net, React)

- Built multiple .NET Core microservices and new .NET Core web APIs
- Maintained a .NET Framework web application with a React frontend
- Created a standardized Android Virtual Device configuration mirroring the production device, enabling consistent Xamarin development across the team

Inetum

Poznan10/2019 - 12/2020

Junior QA Automation Engineer (Groovy, .Net, Azure)

- Developed regression test automation in Groovy and Geb for the kdprevent software
- Reworked and maintained a test automation framework for an Azure-based project in .NET (C#) and Python

Inetum

Poznan07/2019 - 09/2019

QA Automation Engineer Intern (Java, Groovy)

- Developed regression test automation in Groovy and Geb for the kdprevent software
- Created a Java and Selenium test automation framework as a contractor for a business client

OPEN SOURCE

MedTimer

02/2026 - Present

- Open-source Android medication reminder app (Kotlin, 620+ GitHub stars), available on Google Play and F-Droid. #2 human contributor: 288 commits, 37 merged PRs, 22+ PR reviews.
- Migrated remaining Java code to Kotlin, adopting coroutines and Flow across data, reminder and statistics layers
 - Introduced Hilt dependency injection across the app and split DAOs and repositories per entity
 - Split the monolithic app into core and feature Gradle modules (domain, database, datastore, reminders, UI) and moved to a version catalog
 - Rewrote statistics and overview screens in Jetpack Compose, reworked instrumented tests and added database seeding
 - Authored coding guidelines for AI-generated code and Compose

zstd-jni

JNI bindings for the Zstandard compression library for Java, Android and other JVM languages (1,000+ GitHub stars). 5 merged PRs, shipped in 1.5.7-13.

- Migrated the Android AAR build to Gradle Kotlin DSL with a version catalog and NDK 29, eliminating Google Play's 16 KB page-size warning
- Added nullability annotations and missing null checks across the public API
- Fixed broken CI and updated GitHub Actions steps to current versions

 07/2026 - 08/2026

PROJECTS

DiagnosisReportGenerator

Repeatable diagnosis report generator for a medical practice; ASP.NET Core, ABP and EF Core backend with an Electron/TypeScript client.

 01/2024 - Present

Device-Manager-for-BleBox

Tauri desktop app to configure BleBox smart-home action triggers; React/TypeScript UI, Rust backend, mDNS device discovery.

 05/2026

Chrome-Extension-Boilerplate-React-Vite

Open-source Chrome MV3 extension boilerplate: React 19, TypeScript, Vite 8, CRXJS, TanStack Router.

 03/2024 - Present

LyricCast

Android app casting song lyrics to TVs via Google Cast for churches; Kotlin, Compose, Hilt, Room, JS Cast receiver. Available on [Google Play](#).

 10/2020 - Present
